

XPC SB95P v2: The world's first Intel 925XE SFF

With wicked-fast 1066MHz FSB, dual-channel 533MHz DDR2 housed in the phenomenal P-Series chassis

(Taipei, Taiwan — January 6, 2005) Shuttle Inc, a leading designer and manufacturer of small form factor (SFF) computers and accessories, today introduces the XPC SB95P v2, the world's first SFF computer based on the best-of-class Intel® 925XE chipset. Featuring support for wicked-fast 1066MHz Pentium® 4 CPUs, x16 PCI E graphics cards and next generation dual-channel 533MHz DDR2 memory, the XPC SB95P v2 defines computing on the edge.

“The increasing affordability of next-gen DDR2 memory means migrating your game play to the bleeding edge isn't just practical, it's a necessity,” said Ken Huang, vice president, marketing.

Featuring Shuttle's phenomenal “P” series chassis, the XPC SB95P v2 delivers integrated RAID (0, 1) functionality and bays for three 3.5-inch hard disk drives (toolless installation). Further, with Intel's Matrix Storage Technology, High Definition Audio (7.1 channel) and next-gen PCI Express x1 I/O architecture, as well as a full palette of integrated I/O ports, users get a superbly functional solution right out-of-the-box.

With advanced PCI Express graphics boards, and 3.8GHz and beyond Intel® Pentium® 4 processors in mind, Shuttle has completely re-engineered its platform-defining “Super Quiet, Super Cool” Silent X technologies. Integrated 4G ICE technology, Silent X PSU and advanced airflow dynamics help make the XPC SB95P v2 the most-advanced SFF computer available.

Shuttle has once again raised the SFF performance bar while simultaneously refining ergonomics and style with the introduction of the XPC SB95P v2. Contact your local “Powered by Shuttle” authorized reseller for XPC SB95P v2 product, pricing and availability information—[where to buy](#).
