Press Release

Accelero S1

Passive 4 heatpipes cooling solution for high performance graphics

Pfäffikon/ Switzerland, 24.4.2007. The Swiss cooling solution provider – ARCTIC COOLING brings a radically new noise free experience for serious gamers. To provide passive cooling for high-end graphic cards, Accelero S1 is a high performance passive cooler featuring 4 heatpipes connected with extra large surface area. It effectively removes a great deal of heat from the graphic cards keeping the components cool. Thanks to the elegant design, Accelero S1 outperforms some active cooling solutions. Accelero S1 creates a true industry leading zero noise cooling solution for all enthusiast gamers.

Radically new optimized passive design

Accelero S1 features 4 thick copper heatpipes which connect directly from the GPU core. The heatpipes with sintered powder wicks provide ultimate heat conductivity. Heat from the GPU is rapidly dissipated through 32 fins that extend beyond the height of the graphic card. Optimized fin design allows better air flow thus removing the heat more effectively. Together with the bundled RAM heat sinks and voltage regulator heat spreader, Accelero S1 provides an all-round passive solution that achieves the best cooling performance.

Never compromised on noise

Install and forget about it – No moving parts means it is maintenance free. An extra pair of mounting clips provides extensive protection to the graphic card that prevents damage from improper handling. With the help of the new mounting design, Accelero S1 is widely compatible with ATI (Radeon X1950, X1900, X1800) and nVIDIA (GeForce 7950, 7900, 7800, 6800) graphic cards.

Accelero S1 will be available by end of May 2007. The MSRP is USD 29 and Euro 24 (excl VAT).
